Prior To The Procedure

1. Please obtain the two prescribed drops below at your local pharmacy and bring them with you on the day of your procedure.

Postoperative Eye Drop Regimen (Wait at least five minutes in between drops)

TobraDex

This is an antibiotic and steroid drop combination used to prevent infection, decrease inflammation and regulate healing after surgery. Use one drop in the operative eye(s) every two hours for 24 hours, followed by one drop, four times daily for four days.

Theratears (Preservative Free Individual Use Vials)

This is a preservative free lubricant eye drop that is necessary to keep the eyes lubricated and to aid the healing process. Use one drop every two hours for two months, followed by one drop, four times daily for six to eight additional months.
